

How to play

- Shuffle the cards and distribute 5-10 cards to each player/group.
- The task is to sort the ideas into "Probably okay" and "Probably risky"; alternatively, sort from low to high risk.
- Allow about one minute per card.
- Option: Ask players to share cards from their categories.
- Reveal the rubric. Ask players to share more, especially those ranked differently to the rubric.

Some principles for safe AI

- Consequences of errors are small.
- **You have expertise** in the topic or domain of your query.
- AI is **assisting** (eg highlighting errors in a translation) not **executing** (eg fixing the errors).
- If a person is the subject of your query, you have express permission from them to use AI.
- On large-scale tasks, the average performance is more important than each example being correct.
